

Pretreatment - Sediment Filters

TAFMZ Series, 2" Sediment Filter

The Biolab TAFMZ 2" Series Sediment Filter is designed to efficiently remove suspended solids and fine turbidity particles down to 5 micron from incoming water.

Our complete system series features the Magnum IT^{TM} valve with standard controller for simple operation and efficient backwashing.

Operating Parameters

Pressure: 20-100 psi (138 - 690 KPA)
Temperature: 35-100° F (2-38° C)
Electrical: 115/60Hz, single phase

Inlet/Outlet: 2.0 inchDrain: 1.5 inch

Materials of Construction

Media Tank: FRP - HDPE lined
 Control Valve: Glass filled Noryl*
 Media: Micro Z with gravel bed

· Distributor Piping: PVC

Standard Features

- Fully automatic backwash
- Flow rates up to 75 USgpm
- Parallel flow rates up to 150 USgpm
- Durable, high quality Micro Z[™] media
- Less then 5 micron filtration
- · Non-corroding fiberglass tank
- · Valve constructed of plastic materials
- · Standard reliable electronic timer
- Up to 2 x loading capacity compared to standard multimedia (reduced backwash frequency)

Options Available

- · Single or parallel configurations
- Free standing or skid-mounted systems
- · Factory, fully pre-plumbed & pre-wired systems
- Custom installations and valve nests to meet facility requirements

Typical Applications

- Reverse osmosis system pretreatment
- Boiler feedwater
- · Reagent grade lab water systems
- USP purified water systems
- Hemodialysis & Life Sciences water systems
- · Commercial & Industrial water systems
- Food and Beverage Industry

TAFMZ Series 2" Sediment Filters @ 25°C							
Model Number	Flow Design (USgpm)	Media Volume (Ft. ³)	Backwash Flow (USgpm)	Pressure Drop @ Peek (psig)	Media Tank W x H (In.)	Shipping Weight (Lbs.)	Space Requirements W x D x H (In)
TAFMZ-1865M	25	5	25	3	18 x 65	600	18 x 18 x 84

TAFMZ-3072M	75	15	70	17	30 x 72	1335	30 x 30 x 99

Note: All weights and dimensions are approximate.

Installation Considerations

- For proper serviceability, it is recommended that there be 18" of space around the entire system. A minimum of 12" is required. The tanks should be installed on a firm, level surface.
- · The inlet piping should be sized large enough to provide the required water flow for both service flow and backwashing of the tanks with minimum amount of pressure loss.
- A drain with suitable capability for the backwash flow rate of the tanks is required.
- Isolation valves, pressure gauges, sample ports, a vacuum breaker and a relief valve should be installed on each assembly.
