

## PRODUCT UPDATE MEMO

**To:** Our Customers  
**From:** Michael Verguldi, Product Manager - Medical  
**Date:** July 1, 2013  
**Subject:** Wall Dispensing Units

---

**Background:** Back in the mid-to-late 90's; ZyzaTech Water Systems, Inc.; later known as Osmonics or GE Water & Process Technologies' Medical Operations, had developed and sold a Wall Dispensing Unit with a Drain Sink for use with their dialysis RO water treatment unit and Solution Delivery System. These dispensing units were externally mounted at any location requiring the appropriate solutions. Over the years, the market changed and began to accept a recessed style wall box. Due to low sales; product consolidation efforts within the Mar Cor Purification, Inc. (MCP); and other factors; MCP has officially discontinued offering this product line.

**Action:** As of the effective date listed below, these wall dispensing units and drain sinks will no longer be available. All inventories, which include final assembled units and the dispensing box itself along with the drain sink, have been depleted, making them obsolete; unable to be purchased. Certain parts and fittings associated with these units that are common for other applications may still be available should they be required. Product assistance is available by contacting the Technical Support team for any related questions at 800-633-3080, Ext. 2904. MCP will continue to offer Wall Boxes for the dialysis community, such as the recessed DW style, in the days ahead. For more information, please contact your local Sales Representative or Inside Sales at 800-633-3080, Ext. 2109 or visit us online at [www.mcpur.com](http://www.mcpur.com).

**Effective Date:** July 1, 2013
