

PTS-47

Pretreatment Testing Station

The PTS-47 is a Pretreatment Testing Station specifically designed for hemodialysis water treatment systems. It serves as a collection site for the express purpose of analyzing incoming water conditions. It holds four (4) sample valves with the capacity for seven (7) thereby allowing clinical personnel to collect all required feed water tests from one location. Sample ports that are normally found after each required pretreatment device are now routed directly to the PTS-47.

Standard Features

- Convenient – One location to collect and test required feed water samples and a built-in shelf holds testing supplies.
- Accessible – Eliminates tight spaces between pretreatment devices making collecting samples easier.
- Accurate – Enhances sampling techniques by improving rinse-time capability.
- Identification – Descriptive sample port labeling and color-coded valves provide quality assurance.
- Clean – Large drain basin keeps floors dry while sampling from multiple ports.
- Compact – Small footprint and unique bracket make it simple to position and install quickly.

Specifications

- Testing Station: Plastic
- Valves: Polyvinylchloride, 3/8", Gray body, valve handles color-coded
- Tubing: Polyethylene, 1/4", Black
- Station Drain: Plastic, 1-7/16" opening
- Drain Fittings: Polyvinylchloride, SCH40
- Dimensions: 12" W x 15" H x 6" D
- Weight: 5 lbs.

Note: All dimensions and weights are approximate.

Ordering Information

Part Number	Product	Description
3029384	PTS-47 Testing Station	Kit includes Testing Station*, Pretreatment Valves and Tubing, Drain Fittings and Hardware
3029386	PTS-47 Valve Kit	Kit includes 3 Additional Sample Valves, Pretreatment Valves and Tubing

*Drain pipe is not included in the kit but may be required
